Resume

In this letter you will find summarization of my experience, motivation and expectations. O hope it will help your organization to get to know me better and make the best decision regarding our further partnership.

At the moment I have completed nine month long programming courses in private school "CodeAcademy" and looking forward to getting employed in Junior Web Developer position.

I chose my studies to expand my programming knowledge and skillset. I was always fascinated by IT and after four years of working in technical support – I made decision to follow my true passion – creation of systems.

Previous experience with Indian programmers, business partners in EMEA region and locally – in Lithuania allowed me to get better understanding of teamwork despite time and distance, cultural, language and technical knowledge barriers. All the time while I was working as Sr. Financial Systems Analyst – my direct supervisor was American who worked and lived in US. This not only allowed me to grow in planning and self-sufficiency, but also motivated me as I was trusted and my work ethic was unquestioned.

I am motivated by companies which are encouraging employee initiatives – I am awarded twice with Certificates of Recognition from executives for creating time tracking and management system, as well as trainings for accountants. My last and biggest initiative is RFID technology based asset accounting and tracking system, which me and my colleagues built and fully implemented into Oracle Enterprise Resource Planning.

In fall of 2017 – I began to study programming individually through on-line courses, and after several weeks I realized that I prefer to learn in class, so in November – I began my full-time studies in CodeAcademy, which lasted for nine months. I have skills and knowledge to build the webpage from idea to deployment, including databases, SEO, Algorithms, front and back end design.

I do believe that one needs to study programming all the time and I am not discouraged by long road it might take me to become expert in this field. I do have sufficient knowledge to work as a Junior/Mid Developer and in the next few years – the most important and motivating aspect professionally is the organization where I can continually grow.

I hope this letter helped you to know me better, if you have any questions – feel free to reach out and I am looking forward to further cooperation!

Sincerely,
Saulius Usonis
